Community Health Needs Assessment Requirement

According to the Patient Protection and Affordable Care Act (PPACA), all tax-exempt hospitals must conduct a Community Health Needs Assessment (CHNA) once every 3 years. A CHNA is a written document developed for a hospital that includes a description of the community served by the hospital; the process used to conduct the assessment including how the hospital took into account input from community members including those with special knowledge of or expertise in public health; identification of any persons with whom the hospital has worked on the assessment; and the health needs identified through the assessment process. The CHNA written report must include descriptions of the following:

- The community served and how the community was determined
- The process and methods used to conduct the assessment including sources and dates of the data and other information as well as the analytical methods applied to identify community health needs
- How the organization took into account input from persons representing the broad interests of the community served by the hospital, including a description of when and how the hospital consulted with these persons or the organizations they represent
- The prioritized community health needs identified through the CHNA as well as a description of the process and criteria used in prioritizing the identified needs
- The existing health care facilities and other resources within the community and available to meet community health needs

The CHNA requirement also includes that hospitals must adopt an Implementation Strategy to meet the community health needs identified through the assessment. An Implementation Strategy is a written plan that addresses each of the community health needs identified through a CHNA. The plan must include the following:

- List of the prioritized needs the hospital plans to address and the rationale for not addressing other needs
- Actions the hospital intends to take to address the chosen health needs
- The anticipated impact of these actions and the plan to evaluate such impact (e.g. identify the data sources you will use to track the plan's impact)
- Identify the programs and resources the hospital plans to commit to address the health need
- Describe any planned collaboration between the hospital and other facilities or organizations in addressing the health need.

A CHNA is considered conducted in the taxable year that the written report of its findings, as described above, is adopted by an authorized body of the hospital and made widely available to the public. The Implementation plan is considered implemented on the date it is approved by the governing body. Conducting the CHNA and approval of the Implementation Strategy must occur in the same fiscal year. CHNA compliance is reported on IRS Form 990, Schedule H.

Executive Summary

The Community Health Needs Assessment (CHNA) is a requirement of all tax exempt (501(c)(3)) hospitals beginning with fiscal year 2013. As part of the IRS Form 990, Schedule H, individually licensed not-for-profit hospitals are required to assess the health needs of their community, prioritize the health needs, and develop implementation plans for the prioritized health needs they have chosen to address

UC Health has been working with Truven Health Analytics (formerly the Healthcare Business of Thomson Reuters) since October 2012 on completing the CHNA for four (4) of the UC Health facilities: University of Cincinnati Medical Center, West Chester Hospital, UC Health Surgical Hospital and Drake Center.

Truven Health used inpatient data to define the community served for the UC Health hospitals. With the exception of UC Health Surgical Hospital, the community served for each hospital was defined as the counties that comprise up to 80% of inpatient discharges. UC Health Surgical Hospital shares a community served definition with West Chester Hospital given shared operations

As a part of the health needs assessment, Truven Health evaluated the demographics of the community served by each of the hospitals. Some key demographic findings include:

- Over the past 10 years, Hamilton County's population decreased by 5 percent – it is the only UC Health county to lose population
- Warren County's population grew by nearly a third between 2000 and 2010
- Hamilton County has the largest number of disabled residents at more than 95,000
- The largest African American population in both size (205,952 people) and percentage (26%) is in Hamilton County
- The Hispanic/Latino population in the region more than doubled between 2000 and 2010 – the largest percentage growth was in Butler County, which saw an increase from 1.4 % to 4%
- Nearly 1 in 5 residents of Hamilton County live in poverty
- Unemployment is lowest in Warren County

In November 2012, members of the Truven Health team conducted interviews (both one-on-one and small group) and focus groups to take into account input from persons who represent the broad interests of the community served by the hospital (a CHNA requirement). As a part of this process, 37 interviews and 4 focus groups were conducted. Individuals interviewed included representatives of public health departments, such as Tim Ingram, Health Commissioner of Hamilton County Public Health Department, and Kelly Kohake, of the Cincinnati Health Department; representatives of local organizations, such as Peggy Nestor of the Hartwell Improvement Association, Mitchell Willis of Butler County United Way, Renee Harris of Center for Closing the Health Gap; other health care providers, such as Anna Alvarez, with Stay Well Home Health and Maddie Syzek of Su Casa Hispanic Center; and leaders and employees of UC Health familiar with community needs.

The interviews revealed that the majority of individuals gave the current health status of the community a grade of "C" on an A-F scale. Much of this is attributed to obesity, lack of preventive health efforts,

lifestyle, chronic diseases and socioeconomic barriers. The need for more health education, mental health services as well as improved access to preventative care was identified as the top needs across all those interviewed. Not surprisingly, barriers to good health include access issues – especially in the areas of primary care and insurance coverage. The minority and elderly populations as well as people living in poverty were identified as those being most at risk.

In addition to the qualitative feedback, quantitative health indicators were collected and analyzed to assess community health needs. Sixty-nine (69) indicators were evaluated for each of the counties in the UC Health communities served. Health indicators were defined to 13 distinct categories:

Demographics	Socioeconomic	Leading Causes of Death
Access to Health Care	Chronic Conditions	Sexually Transmitted Infections
Maternal Health	Mental Health	Infectious Diseases
Substance Abuse	Obesity	Oral Health
Environmental Health		

For each health indicator, a comparison was made between the county level data and benchmarks. For UC Health, the State of Ohio health indicator scores were used as the comparative benchmark when available; in other cases alternative comparative benchmarks were used. Health needs were identified where the county indicator did not meet the comparative benchmark.

In February 2013, Truven Health presented the findings of the community health needs assessment and facilitated the prioritization of health needs with representatives from UC Health. UC Health participants included:

University of Cincinnati Medical Ctr <ul style="list-style-type: none"> • Tony Condia – UC Health VP of External Affairs • Marla Fuller – UC Health Director of Community and External Affairs 	Drake Center <ul style="list-style-type: none"> • Brenda Ziegler - Administrative Director, Drake Center • Mary Beth Puryear – Drake Center Director of PR & Marketing • 	West Chester Hospital & UC Health Surgical Hosp <ul style="list-style-type: none"> • Grant Wenzel – WCH Director of PR & Marketing • Sara Deem - Surgical Hospital Executive Director • Laura Allarding – UC Health Director of Market Research and Planning
---	---	--

The Prioritization Work Group selected criteria to help prioritize the health needs. The criteria selected included quick success (probability of quick success - is the problem “low-hanging fruit?”), hospital strength (extent to which initiatives that address the health issues can build on hospital existing strength and resources), and alignment (does the need align with current organizational goals/initiatives). Working in small groups that represented each hospital, each health need was rated using the criteria

selected to determine a score for each health need. The needs for each hospital were then prioritized according to their overall score.

The table below indicates the top prioritized health needs identified for each hospital. Even though these health needs had the highest scores, the needs that will actually be addressed for the purposes of the CHNA are at the discretion of each UC Health hospital.

University of Cincinnati Medical Center	Drake Center	West Chester Hospital & UC Health Surgical Hospital
Infant Mortality	Stroke	Healthy Lifestyles and Prevention
Diabetes / Adult Obesity / Hypertension*	Chronic Lower Respiratory Disease	Access to Health Care
Stroke	Chronic Lung Disease	Sexually Transmitted Infections
Mental Health	Access to Health Care	Chronic Conditions
Cancer	Healthy Lifestyles and Prevention	Obesity

*grouped together due to inter-relationship of the conditions

After selecting the community health needs that will be addressed, an implementation plan will be developed for those health needs each hospital plans to address. Additionally, the CHNA process requires an organization to provide rationalization for those health needs that are not addressed. The implementation plans will then need to be approved by the UC Health governing body and attached to the IRS Form 990, Schedule H, for the fiscal year 2013 filing.

MISSION

- Provide life changing, patient centered medical care.
- Drive innovation through groundbreaking research.
- Educate and inspire the next generation of healthcare professionals.

VISION

Our vision is to be the region's quality healthcare partner and a national leader in solving complex medical problems

OUR VALUES

- Respect
- Integrity
- Teamwork
- Excellence

Community Health Needs Assessment Overview and Methodologies

The Community Health Needs Assessment (CHNA) is a requirement of all tax exempt (501(c)(3)) hospitals beginning with fiscal year 2013. As part of the IRS Form 990, Schedule H, individually licensed not-for-profit hospitals are required to assess the health needs of their community, prioritize the health needs, and develop implementation plans for the prioritized health needs they've chosen to address

UC Health partnered with Truven Health Analytics (formerly the Healthcare Business of Thomson Reuters) to complete a Community Health Needs Assessment (CHNA) for each of the following UC Health facilities:

- University of Cincinnati Medical Center
- West Chester Hospital
- UC Surgical Hospital
- Drake Center

Consultant Qualifications & Collaboration

Truven Health Analytics and its legacy companies have been delivering analytic tools, benchmarks, and strategic consulting services to the healthcare industry for over 50 years. Truven Health combines rich data analytics in demographics (including the Community Needs Index, developed with Dignity Health), planning, and disease prevalence estimates with experienced strategic consultants to deliver comprehensive and actionable Community Health Needs Assessments. UC Health did not collaborate with any other local organization in completing this assessment.

Defining the Community Served

University of Cincinnati Medical Center, Drake Center, and West Chester Hospital each have a unique definition of the community served based on inpatient discharge data. Truven Health used inpatient data to define the community served for each facility. The community served was defined as the counties which cumulatively comprise up to 80% of inpatient discharges. UC Health Surgical Hospital is licensed separately by the state of Ohio but currently shares leadership, operations and a campus with West Chester Hospital. Therefore UC Health Surgical Hospital uses the same community served definition as West Chester Hospital.

Assessment of Health Needs – Methodology and Data Sources

To assess health needs of the UC Health communities, a quantitative and qualitative approach was used. In addition to utilizing the A.I.M. Community Health Needs Assessment for Southwest Ohio and Southeast Indiana and collecting data from a number of public and Truven Health proprietary sources, interviews (both in-person and telephone) and focus groups were conducted with individuals representing community leaders/groups, public organizations, patients, providers, and UC Health representatives from the hospital and corporate levels.

Quantitative data sources include:

- A.I.M. Community Health Needs Assessment for Southwest Ohio and Southeast Indiana Greater Cincinnati Health Council (2012)
 - US Census Bureau, 2010
 - American Community Survey 3 year estimates, 2008-2010
 - American Community Survey 5 year estimates, 2006-2010
 - US Department of Labor, Bureau of Labor Statistics, 2010
 - Ohio Family Violence Prevention Project, 2006-2008
 - Ohio Department of Health - ODH Data Warehouse, 2006-2008
 - Ohio Department of Health - Death and Data Statistics, 2010
 - Ohio Department of Health, 2008-2010
 - Ohio Department of Job and Family Services, 2009, 2010
 - Greater Cincinnati Health Council, 2010
 - HHS Office of Women's Health Quick Health Data, 2008
 - Indicators of Health Communities, 2005-2008
 - Ohio Oral Health Surveillance System, 2010
 - CDC National Diabetes Surveillance System, 2008
 - Greater Cincinnati Community Health Status Survey, 2010
 - Ohio Family Health Survey 2008
 - Environmental Protection Agency, 2006-2010
 - Ohio Department of Health 2010
 - USDA Food Atlas, 2008
- Health Indicators Warehouse
 - Behavioral Risk Factor Surveillance System (CDC, PHSPD), 2008-2010
- Truven Health Analytics
 - Community Need Index, 2012

Qualitative Assessment of Health Needs

To take into account the input of persons representing the broad interests of the community, Truven Health conducted interviews (both one-on-one and small groups) as well as focus groups in November 2012. The interview questionnaire was designed to understand how participants feel about the general health status of the community and the various drivers contributing to health issues. Thirty seven interviews were completed for the CHNA process for UC Health. Individuals were grouped into the following categories to ensure broad participation: community leaders/groups, public health and other healthcare organizations, other providers (including physicians), and UC Health representatives (corporate and hospital).

Four (4) focus groups were also conducted to solicit feedback from community members. Focus groups were designed to familiarize community members with the CHNA process and gain a better understanding of the community's perspective of priority health needs. Focus groups were formatted for individual as well as small group feedback and also helped identify other community organizations

already addressing health needs in the community. Two (2) Focus Groups were conducted for UCMC/Drake Center and two (2) Focus Groups for West Chester Hospital/UC Health Surgical Hospital. A total of 32 community representatives participated in the Focus Group Sessions.

Quantitative Assessment of Health Needs

In addition to the qualitative feedback, quantitative health indicators were collected and analyzed to assess community health needs. Sixty-nine indicators were evaluated for each of the counties in the UC Health communities served. The categories and indicators included the following:

Demographics <ul style="list-style-type: none"> • 2010 Population • 2010 Average Household Size • 2010 Average Family Size • 2010 % of Population with Disabilities 	Socioeconomic <ul style="list-style-type: none"> • 2010 % Poverty • 2010 High School Graduation • 2010 Median Income • 2010 Unemployment • 2010 Vacant Housing % • 2006-2008 Civil Protection Order Petitions • 2006-2008 Homicides • 2009 Food Stamp Benefits • 2008 Students Eligible for Free/Reduced Lunch 	Leading Cause of Death <ul style="list-style-type: none"> • 2010 Heart Disease Death Rate • 2010 Cancer Death Rate • 2010 Unintentional Injury Death Rate • 2010 Alzheimer's Disease Death Rate • 2010 Chronic Lower Respiratory Disease Death Rate • 2010 Stroke Death Rate
Access to Health Care <ul style="list-style-type: none"> • 2010 % Medicaid • 2010 % insurance coverage • 2010 Regular source of care • 2008 No Dental coverage • 2008 No Vision coverage • Primary Care Shortage Areas • Medically Underserved Areas/Populations • 2010 Delayed medical care • 2010 Delayed Dental Care • 2010 Delayed Prescription Medicine • 2010 Problems paying medical bills 	Chronic Conditions <ul style="list-style-type: none"> • 2010 Asthma • 2010 Cancer • 2010 Diabetes • 2010 Heart trouble/Angina • 2010 Chronic Lung Disease • 2010 Hypertension • 2010 High Cholesterol • 2010 Stroke • 2010 Severe Allergies 	Sexually Transmitted Infections <ul style="list-style-type: none"> • 2010 Chlamydia Rate • 2010 Gonorrhea Rate • 2008 People Living w/ HIV/AIDS • 2008 Syphilis Rate
Maternal Health <ul style="list-style-type: none"> • 2007 Infant Mortality Rate • 2008 Prenatal Care • 2008 Preterm Births • 2008 Low Birth Weight 	Mental Health <ul style="list-style-type: none"> • 2010 Mentally unhealthy days • 2010 Diagnosed Depression 	Infectious Diseases <ul style="list-style-type: none"> • 2008 Hepatitis A Infection Rate • 2008 Hepatitis B Infection Rate • 2005-2008 Tuberculosis Rate
Substance Abuse <ul style="list-style-type: none"> • 2010 Smoking • 2010 Binge Drinking • 2010 Drinking & Driving • 2010 Abuse of Prescription/OTC drugs 	Obesity <ul style="list-style-type: none"> • 2008 Adult Obesity • 2009-2010 Childhood Obesity 	Oral Health <ul style="list-style-type: none"> • 2010 Children with Sealants

Ambulatory Sensitive Conditions <ul style="list-style-type: none"> • 2010 Ambulatory Sensitive Cases • 2010 Ambulatory Sensitive Charges 	Environmental Health <ul style="list-style-type: none"> • 2006-2010 Air Quality Index Good • 2006-2010 Air Quality Index Moderate • 2008 Water Fluoridation 	Healthy Lifestyle & Prevention <ul style="list-style-type: none"> • 2010 Safe walking, jogging, or biking • 2008 Recreation and Fitness Facilities • 2008-2010 Colorectal Screening • 2008-2010 Breast Cancer Screening • 2008-2010 Pap Test • Eye Exam 2010
---	---	---

For each health indicator, a comparison was made between the county level data and benchmarks. Benchmarks were based on available data and primarily included the United States and the State of Ohio. In some cases the benchmark included Greater Cincinnati (for Greater Cincinnati Community Health Status Survey) or the City of Cincinnati. For UC Health, the State of Ohio health indicator scores were used as the comparative benchmark when available; in other cases alternative comparative benchmarks were used. Health needs were identified where the county indicator did not meet the comparative benchmark.

Information Gaps

The community served definition for each hospital was determined based on the counties that cumulatively contribute at least 80% of inpatient discharges. The most geographically detailed health indicators are often available only at the county level. This presents a number of challenges as health indicators were evaluated across several counties for each of the UC Health hospitals. In evaluating data for entire counties versus ZIP code level data, it is difficult to understand the health needs for specific population pockets within a county. It is also a challenge to tailor programs to address community health needs as placement and access to those programs in one part of the county may or may not actually impact the population who truly need the service.

Prioritizing Community Health Needs

Using the qualitative feedback from the interviews and focus groups and the health indicators data, a list of community health needs were identified for each UC Health facility. To prioritize the identified health needs, Truven Health facilitated a prioritization session with UC Health representatives. Participants included:

University of Cincinnati Medical Ctr <ul style="list-style-type: none"> • Tony Condia – UC Health VP of External Affairs • Marla Fuller – UC Health Director of Community and External Affairs 	Drake Center <ul style="list-style-type: none"> • Brenda Ziegler - Administrative Director, Drake Center • Mary Beth Puryear – Drake Center Director of PR & Marketing • 	West Chester Hospital & UC Health Surgical Hosp <ul style="list-style-type: none"> • Grant Wenzel – WCH Director of PR • Sara Deem - Surgical Hospital Executive Director • Laura Allerding – UC Health Director of Market Research and Planning
---	---	--

Utilizing a modified version of a method developed by Hanlon and his colleagues (see Hanlon & Pickett, 1990), UC Health representatives selected criteria in order to prioritize the health needs. The original list included 9 criteria including magnitude of the health need, consequences as a result of the health need, feasibility that the problem is amenable to interventions, impact of the health need on vulnerable populations, whether the health need is a root cause for other issues, hospital capacity to address the issue, whether the issue can be addressed using the hospital's existing strengths and resources, the availability of local expertise to address the issue, and the probability of quick success. Participants were given the opportunity to remove items or add additional items to the list of criteria. UC Health participants choose to include the criterion of "alignment with current organizational initiatives." Participants were then asked to select the top 3-5 prioritization criteria.

Using a multi-voting process, the criteria selected included **quick success** (probability of quick success - is the problem "low-hanging fruit"?), hospital **strength** (extent to which initiatives that address the health issues can build on hospital existing strength and resources), and **alignment** (does the need align with current organizational goals/initiatives?). After choosing the criteria, UC Health representatives worked in small groups that represented each facility and rated each community specific health need using the criteria selected to determine a score for each health need. Health needs that scored the highest against the selected criteria served as the starting point for the health needs to be addressed. Each UC Health facility then worked to determine the top health needs their facility would address.

Summary

UC Health conducted a Community Health Needs Assessment between October 2012 and May 2013 to identify and begin to address the health needs of the communities which each hospital serves. Using both qualitative community feedback as well as publically available and proprietary health indicators, UC Health was able to identify and prioritize community health needs for each of their hospital facilities. The remainder of this report will provide a detailed assessment for University of Cincinnati Medical Center.

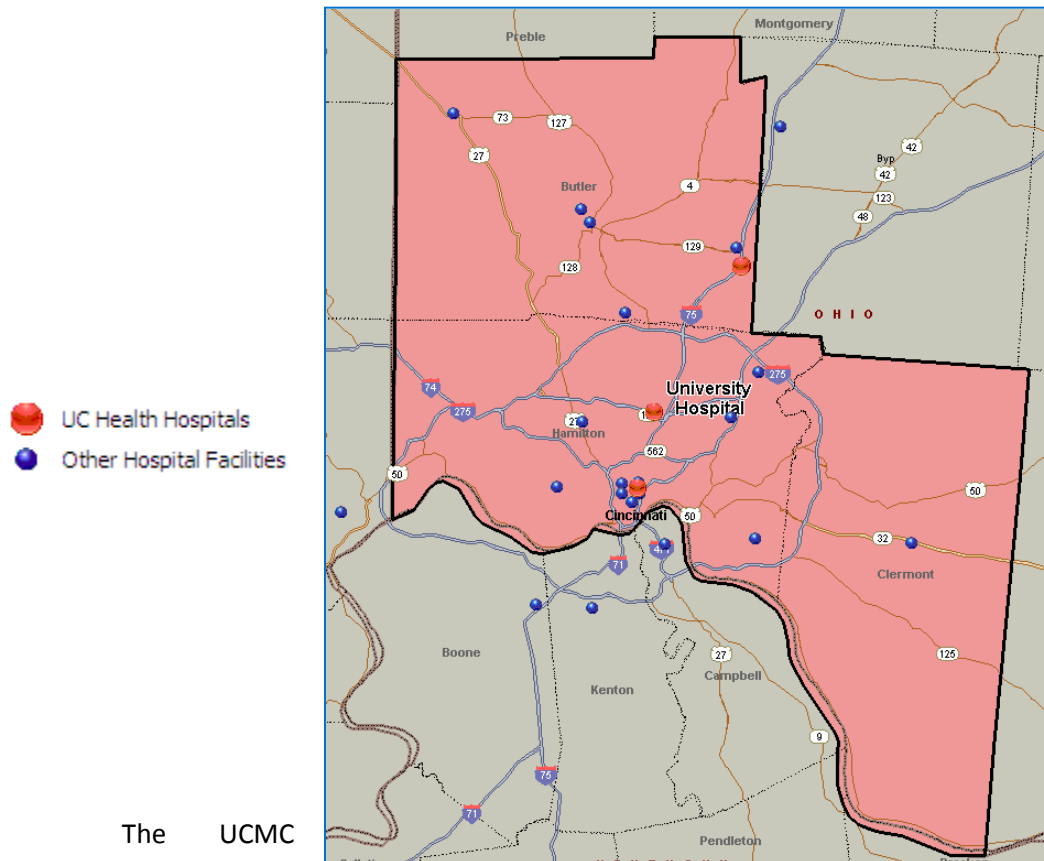

University of Cincinnati Medical Center

University of Cincinnati Medical Center (UCMC) opened in 1823 as the country's first teaching hospital with a mission to provide care for the aged, indigent and orphaned. Today, this mission continues. UCMC has an international reputation, bringing thousands of people from the region and around the world to Cincinnati to receive care from world-renowned physicians in state-of-the-art medical facilities. Many physicians at UCMC are also faculty physicians at the University of Cincinnati College of Medicine, one of the top 50 medical schools in the country. These physicians have access to the latest technological procedures and clinical trial medications, ensuring the best quality of care for patients. This tradition of excellence consistently places it among the nation's best in the prestigious *U.S. News & World Report* annual guide to "America's Best Hospitals." UCMC, along with the UC College of Medicine claims many firsts including Albert Sabin's development of the polio vaccine and the country's first training program for emergency medicine physicians.

Community Served and Demographics

The community served for UCMC was determined as the counties that comprise up to 80% of inpatient discharges. Three counties constitute the community served for UCMC: Hamilton, Butler and Clermont. Information on the cumulative inpatient volume by count can be found in **Appendix A**. Below is a map that illustrates the UCMC community served.

UNIVERSITY OF CINCINNATI MEDICAL CENTER

The UCMC

community served

population is approximately 1,367,867. Over the past 10 years, Hamilton County's population decreased by 5 percent – it is the only county in the UCMC community to lose population. Hamilton County also has the largest number of disabled residents at more than 95,000. In terms of racial/ethnic composition, the largest African American population in both size (205,952 people) and percentage (26%) is in Hamilton County. Meanwhile the Hispanic/Latino population in the region more than doubled between 2000 and 2010 – the largest percentage growth was in Butler County, which saw an increase from 1.4 % to 4%. Additionally, nearly 1 in 5 residents of Hamilton County live in poverty.

Metric	Butler	Clermont	Hamilton
Population	368,130	197,363	802,374
Median Age	36.0	38.5	37.1
Avg. HH Size	2.63	2.61	2.34
Avg. Family Size	3.10	3.06	3.04
Median Income	\$54,359	\$56,628	\$46,359
% Adults HS Grads	86%	87%	87%
Hispanic/Latino	4%	3%	3%
White	86%	96%	69%
African American	7%	1%	26%
Asian	2%	1%	2%
Other Races*	4.0%	2.0%	3.5%
% w/ Disabilities**	12%	12%	12%

*Other = American Indian, Alaska Native, Native Hawaiian, Other Pacific Islander, two or more races

** One or more disabilities (emotional, physical, mental or social)

Interviews & Focus Groups

Interviewees and focus group participants were categorized into representative groups. In the chart below, an “I” indicates an interview and “FG” indicates participation in a focus group. For individuals outside UC Health, representative organizations have been listed. The individuals highlighted in yellow indicate public health experts (those with special training or expertise in public health).

Community Leaders/ Groups	Public and Other Organizations	Other Providers	UCMC	
Owens, Col (Junior Attorney- Legal Aid Society, FG)	Grady, Dawn (Marketing/Community Relations Manager- Cincinnati Public Schools, FG)	Lindsay, Dolores (CEO- The Healthcare Connections, FG)	D'alessio, M.D., David (Director of Endocrinology, I)	Coberly, Dr. Leann (Chief of Staff, I)
Hughes, Matt (VP of Development- Urban League of Greater Cincinnati, FG)	Bankston, Karen (Associate Dean of Nursing School- University of Cincinnati, FG)	Singer, Margaret (Caseworker- Su Casa Hispanic Center, FG)	Crawford-Hemphill, Ruby (Assistant CNO, I)	Deledda, Dr. John (Associate Professor/VP of Medical Affairs, I)
Harris, Renee (Executive Director- Center for Closing the Health Gap, FG)	Rugless, Sean (President- African American Chamber, FG)	Syzek, Maddie (Education and Health Promotion Specialist- Su Casa Hispanic Center, FG)	Collins, M.D., (SVP Chairman of Psychiatry, dual interview) (I)	Smitson, Dr. (CEO of Central Clinic, I)
Daly, Trey (Attorney- Legal Aid Society, FG)	Walsh, Janet (Director of Public Affairs- Cincinnati Public Schools, FG)	Kohake, Kelly (Corporate Compliance- Cincinnati Health Department, FG)	Fox, Peter (Administrative Director- Psychiatry, dual interview) (I)	Warm, Eric (Program Director of Internal Medicine Residency, I)
Brazzile, Reginald (Director of Community Engagement, Avondale Comprehensive Development, FG)	Cornejo, Alfonso (President- Hispanic Chamber, FG)	Ingram, Tom (Health Commissioner- Hamilton County Public Health Department, FG)	Jackson, Jennifer (CNO, I)	Vance, Kim (Assistant CNO, I)
Jefferson, Fulton (VP, Avondale Community Council, FG)			Gibler, Brian (CEO, I)	Mynatt, Janie (Director of Social Work, I)
Warren, Judith (Executive Director- Health Care Access Now, FG)			Kelly, Dr. Elizabeth (College of Medicine/Director, Division of Community Women's Health, I)	Lenchitz, Dr. Bernard (Associate Professor/Medical Director of Community Health, I)
Smith, Lois (Board Member- Hartwell Improvement Association, FG)			Flood-Shaffer, Dr. Kellie (Associate Professor/Division Director OBGYN, I)	
Nestor, Peggy (Board Member- Hartwell Improvement Association, FG)				

In the interview process, the majority of individuals gave the current health status of the community a grade of “C” on an A-F scale. The major issues contributing to this health status include obesity, lack of education, chronic diseases, and prevention/lifestyle choices.

For the UCMC community, the top five health needs identified in the interview process include:

1. Obesity
2. Mental Health
3. Prevention/Lifestyle Modification
4. Education
5. Diabetes

Barriers to good health care in this community include access to healthcare/transportation, lack of education, inadequate financial resources, and lifestyle choices. The elderly and minority populations as well as the poor were identified as vulnerable groups that will need special attention when addressing health needs.

Focus group participants were asked to “grade” the health of the community based on an A-F scale, provide feedback in terms of that grade, and work in small groups to determine the top 3 health needs of the community. For the UCMC community, the average grade for the health of the community was a “C.” Much of this was attributed to the lack of access to healthy food/healthcare, lifestyle choices, smoking/tobacco use, health disparities, and a fragmented healthcare system. While there are numerous resources available, many participants felt they would be more successful if there was more collaboration across healthcare providers and other community groups.

The focus groups split into four smaller work groups to determine the top 3 health needs of the community. For the four focus groups, the top health needs identified include:

Group 1	Group 2	Group 3	Group 4
<ul style="list-style-type: none"> Wellness/prevention for women Chronic diseases Coordinated care 	<ul style="list-style-type: none"> Expansion of health coverage Nutrition Shortage of health providers 	<ul style="list-style-type: none"> Infant mortality rate Access to primary care Education 	<ul style="list-style-type: none"> Obesity Chronic diseases Substance abuse

In the same small groups, focus group participants were asked to identify community resources that could help address the health issues in the community. Some of the resources identified include:

<ul style="list-style-type: none"> Community Health Officials Local Health Department Education System Churches Legal Aid Society Fire Department 	<ul style="list-style-type: none"> Non-Profits YMCA UCMC Boys & Girls Club Crossroads Community Rec. Centers 	<ul style="list-style-type: none"> Children’s Hospital Fortune 500 Companies Charitable Pharmacy Drake Center Chamber of Commerce STRIVE
---	--	--

Appendix B includes a more comprehensive list of existing community resources available to address the health needs of the community.

Health Indicators

The community served was defined at the county level, and a majority of the most geographically detailed health indicators were only available at the county level. However there were some indicators available for the City of Cincinnati. Therefore health indicators for UCMC were evaluated for Butler County, Clermont County, Hamilton County, and the City of Cincinnati (where available). These geographies represent the community served. Health needs for those geographies that did not meet the state benchmark are listed below.

Population

- Education - %HS Grad (B,C,H,)
- Domestic Violence (B,C,H)
- Poverty (H)
- Vacant Housing (H)
- Homicides (H)

Leading Cause of Death

- Injury – Unintentional (B,C)
- Alzheimer’s (B,H)
- Chronic Lower Respiratory Disease (B,C)
- Stroke (C,H)

Access to Health Care

- Designated Primary Care Health Professional Shortage Areas (B,C,H)
- Designated Medically Underserved Areas/Populations (B,C,H)
- Insurance Coverage – Adults (C,City)
- Vision Coverage –Adults (C,H)
- Delayed Medical Care Due to Finances (C,City)
- Delayed Dental Care (C,City)
- Delayed Prescription Medication Due to Finances (C,City)
- Problems Paying Medical Bills (C,H)
- Regular Appropriate Source of Care (City)

Maternal Health

- Infant Mortality (B,H)
- Prenatal Care in First Trimester (B,C,H)
- Pre-term Births (B,C,H)
- Low-Birth weight Babies (H)

Ambulatory Sensitive Conditions

- ED Charges Due to ASCs (C)

Mental Health

- Depression (B)
- Mentally Unhealthy Days- Adults (H,C)

Chronic Conditions

- Asthma (B,C,H)
- Cancer (B,H)
- Chronic Lung Disease (B)
- Diabetes (B,C)
- Heart Trouble/Angina (C)
- High Cholesterol (C,H)
- Hypertension (B,C)
- Severe Allergies (B,C)
- Stroke (B,C)

Infectious Diseases

- Hepatitis B Infections (B,C,H)
- Tuberculosis (B,H)

Sexually Transmitted Infections

- Chlamydia Infections (H)
- Gonorrhea Infections (H)
- HIV/AIDS Prevalence (H)
- Primary/Secondary Syphilis Infections (H)

Obesity

- Adult Obesity (B,C)
- Childhood Obesity (B,C)

Substance Abuse

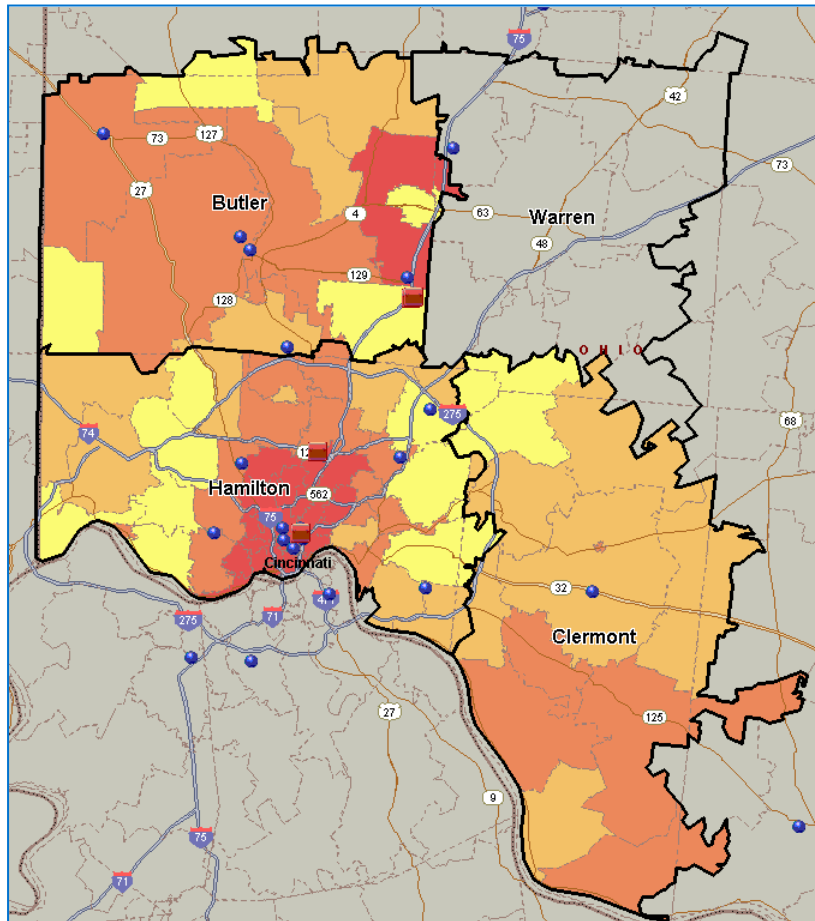

- Smoking – Adult (B,C,H)
- Abuse of Prescription/OTC Drugs – Adult (B)

Healthy Lifestyle/Prevention

- Streets Do Not Allow for Safe Walking/Jogging/ Biking (C)
- Comprehensive Eye Exam - Adults (C)
- Mammography Screening - Women 50+ (H)
- Pap Tests - Women 18+ (B)

*The county/city that did not meet the benchmark is indicated in parenthesis:
B=Butler Co, C=Clermont Co., H=Hamilton Co., City=City of Cincinnati*

The Truven Health Community Need Index (CNI) is a statistical approach to identifying health needs in a community. The CNI takes into account vital socio-economic factors that are known barriers to health care (income, cultural, education, insurance and housing) to generate a CNI score for every populated ZIP code in the United States. The CNI is strongly linked to variations in community healthcare needs and is a strong indicator of a community's demand for various healthcare services. Since a majority of the health indicators are only available at the county level, the CNI score is very helpful for understanding and targeting communities that have the greatest health disparities.

The UCMC community served has an overall CNI of 3.2 on a scale of 1.0 (lowest needs) – 5.0 (highest needs). However the individual ZIP Code scores show a concentration of need within and around the City of Cincinnati and the eastern portion of Butler County.

Community Need Index

CNI Score by ZIP Code

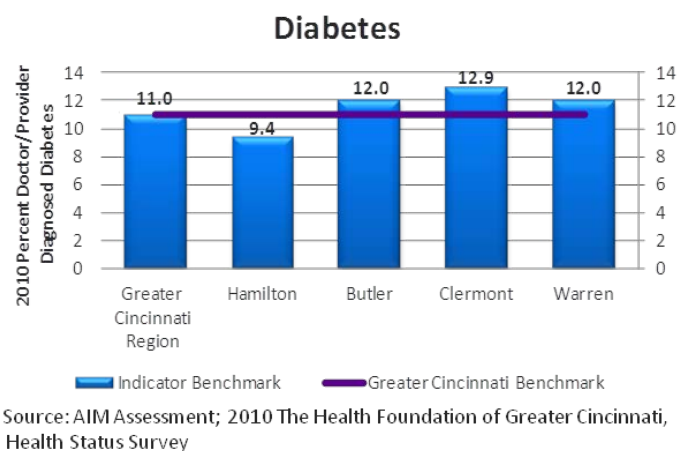

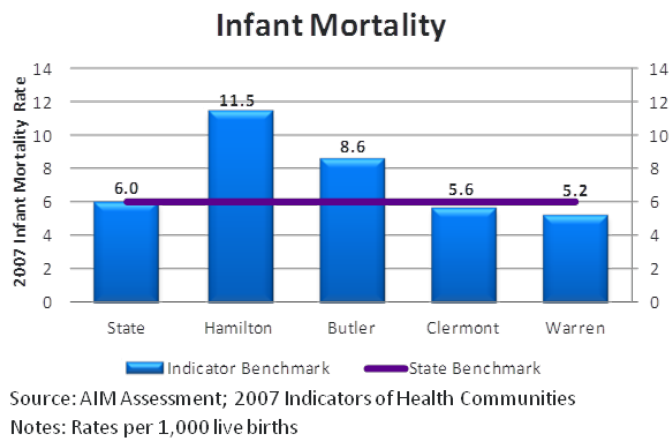

Prioritized Health Needs

From UCMC, Tony Condia, UC Health Vice President of External Affairs and Marla Fuller, UC Health Director of Community and External Affairs, participated in the prioritization meeting.

Using the criteria selected by the larger group, the 5 health needs that scored the highest in the prioritization process for UCMC were:

- 1) Infant Mortality
- 2) Diabetes / Adult Obesity / Hypertension
(grouped together due to inter-relationship of the conditions)
- 3) Stroke
- 4) Mental Health
- 5) Cancer

For each of the prioritized health needs, the comparative benchmark graph has been provided to illustrate gaps between county indicators for the community served and the benchmark (purple).

Adult Obesity

Hypertension

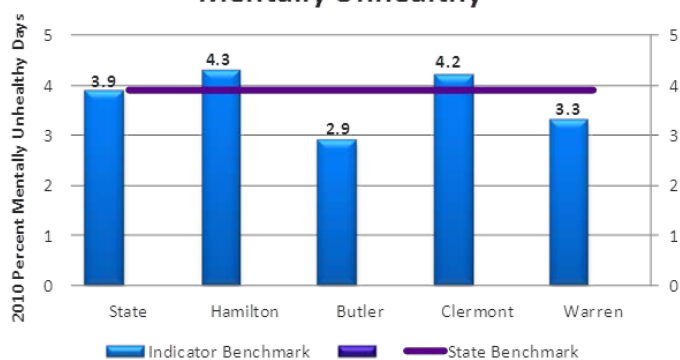

Source: AIM Assessment; 2010 The Health Foundation of Greater Cincinnati, Health Status Survey

Stroke

Source: AIM Assessment; 2010 Ohio Department of Health, Death and Data Statistics

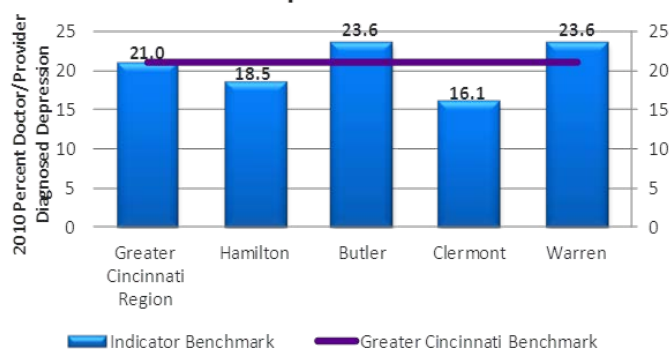

Mentally Unhealthy

Source: 2010 Behavioral Risk Factor Surveillance System (BRFSS)

Notes: Average number of reported mentally unhealthy days per month
Among adults 18+

Depression

Source: AIM Assessment; 2010 The Health Foundation of Greater Cincinnati, Health Status Survey

Cancer

Source: AIM Assessment; 2010 The Health Foundation of Greater Cincinnati, Health Status Survey

Summary

The community health needs assessment for the UCMC community served revealed a number of health issues related to disease management, lifestyle choices, and/or socioeconomic or environmental factors. By weighing the qualitative feedback and the quantitative data, along with the prioritization criteria, the top health needs identified include: infant mortality, diabetes/adult obesity/hypertension, stroke, mental health, and cancer.

UCMC worked with internal stakeholders to determine the community health needs to be addressed. With the goal of improving the health of the community, implementation plans with specific tactics and time frames have been developed to address these health needs.

Appendix A – Community Served Definition

The CHNA regulation requires each hospital define their “community served” for the purposes of the assessment. The University of Cincinnati Medical Center community is defined as the counties that make up to at least 80% of inpatient discharges based on 2011 data.

University of Cincinnati MC	
County	2011 cum % IP Volume
Hamilton, OH	68%
Butler, OH	76%
Clermont, OH	80%

Health Conditions/Diseases: Diabetes

Program Name	Description	Website	Phone Number	State	County
The Ohio Diabetes Prevention and Control Program (ODPCP)	The Ohio Diabetes Prevention and Control Program (ODPCP) strives to improve Ohioans' access to quality diabetes care and services for the purpose of reducing the burden of diabetes and its complications. Our goal is to make Ohio the place where people with diabetes live better lives. We work to establish a widely accepted statewide plan for the control of diabetes, while placing a priority on reaching high-risk, under-served, and disproportionately affected populations. The ODPCP is working towards decreasing diabetes prevalence and diabetes-related complications such as; amputations, renal disease, cardiovascular disease, and blindness. We intend to achieve such a statewide plan through establishing a network of diabetes care, prevention, and awareness of the burden of diabetes in Ohio. The ODPCP began in 1977 and is located at the Ohio Department of Health, Division of Prevention, Bureau of Healthy Ohio.	http://www.odh.ohio.gov/sitecore/content/HealthyOhio/default/diabetes/odpcp.aspx?sc_lang=en	(614) 466-2144	X

Step Forward	Step Forward is a running training program for the men and women in City Gospel Mission's recovery programs. The team was launched in 2008 as a way to educate participants on the important role physical fitness and proper nutrition has in the recovery process. Our 8-week training program leads up to participating in various races on <u>Flying Pig Marathon</u> weekend.	http://www.citygospelmission.org/stepforward.html	(513) 345-1048	X	
Substance Abuse Risk Reduction Program	Individuals who have been diagnosed with alcohol or drug abuse problems with addiction tendencies benefit from this program. Clients are counseled to develop realistic plans to avoid situations that lead to abuse and to identify alternative behaviors to reduce the risk of addiction.	http://www.recoveryctr.org/sarrp.php	(513) 735-8100		X

Healthy Lifestyle/Prevention: Pap Tests (Women 18+)
